

College of Engineering & Honors College Thesis Mixer

Do Any Describe You?

- **Motivated Maker** - Utilize Design Principles in your career path
- **Impatient Change Agent** - Tackling challenges in community and globally
- **Synthesizer** - Opting for both-and instead of this-or-that. Porque no los dos?
- **Enthusiastic Entrepreneur** - Client-driven product-focused

open-sensing.org

Hands-On, Collaborative, Impact

- ✓ *Solve real-world problems for real-world clients*
- ✓ *Co-Design with peers across disciplines*
- ✓ *Learn New Skills*
- ✓ *Climate, Environment, Hazards, Sustenance, Accessibility*
- ✓ *Community-Engaged: Native Tribes, Deaf and Hard of Hearing, Scientists*

The OPEnS team

97% undergraduate
employees (~35)

Teams:

- Electrical
- Programming
- Mechanical
- Bio/Eco/Env

Dr. John Selker

Dr. Chet Udell

Design for Social Impact

Undergraduate Certificate

✓ **27 Credits**

✓ **Focus Areas:**

- *Sustainability*
- *Technological Innovation in the Arts*
- *Social Change*
- *Transdisciplinary Society*

✓ ***Translate knowledge into action for the greater good***

✓ ***Apply design thinking to solve complex problems***

✓ ***Integrate social justice and responsibility perspectives***

✓ ***Develop communication skills across diverse audiences***

Openly Published Environmental Sensing
Design for Social Impact

Thank You

School of Mechanical, Industrial,
and Manufacturing Engineering

Rogers 426

sarah.oman@oregonstate.edu

MIME Senior Design Coordinator

Honors Collaboration Interests

- **Engineering Education research**
 - **Main Focus:**
 - LGBTQ+ topics
 - neurodivergent topics
 - Can tailor specific topic based on student interest
- **Combining MIME Capstone project with Honors Thesis**

Supporting Honors Theses w/ MIME Capstone Design

Fall

Fall MIME 497

- Lit. Review, Determine Thesis scope

Winter

Winter MIME 498

- Complete capstone, work on start of Thesis concurrently

Spring

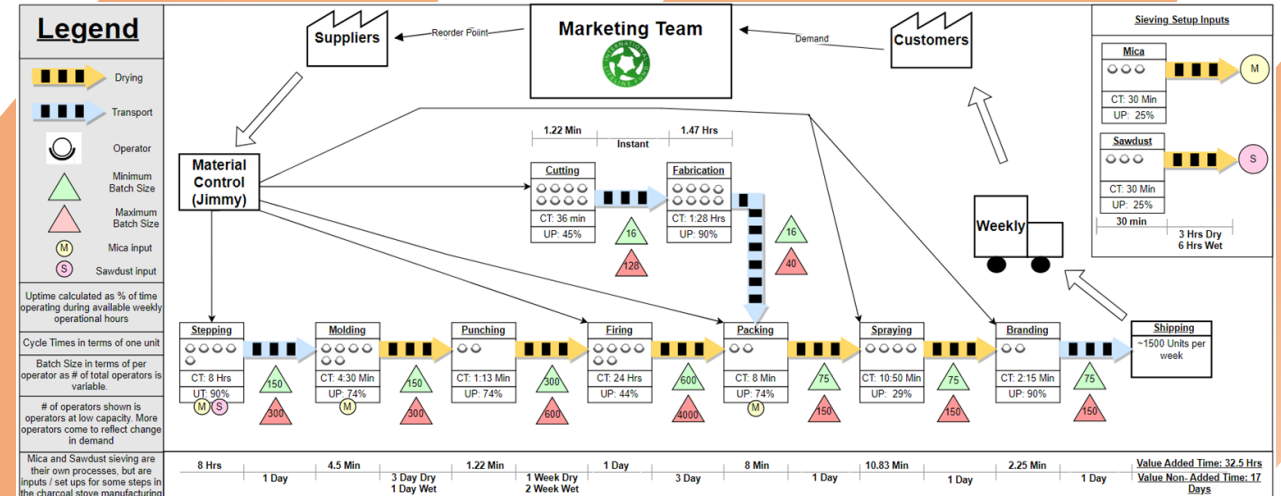

Spring ME 406

- Project analysis, write and present

Create a thesis topic tangential to capstone project

- consider it as a side-project that is an independent study
- Opportunity to delve deeper into a part of the project that you are passionate about

SINGU-HILARITY: A Robot Comedy Variety Show

*Robots are becoming more present in our everyday lives,
but almost no one has seen robots like this before...*

Featuring: Isaac Parris | Jon the Robot | Sarah Hagen
Robot Improv | Naomi Fitter | Baby Blue | and more!

<https://www.facebook.com/singuhilarity.comedy>

Nick AuYeung, School of Chemical, Biological, and Environmental Engineering

Sustainability, Decarbonization, Energy Efficiency

- *Storage of heat using reversible chemical reactions*
- *Solar-driven fuel/chemical production*

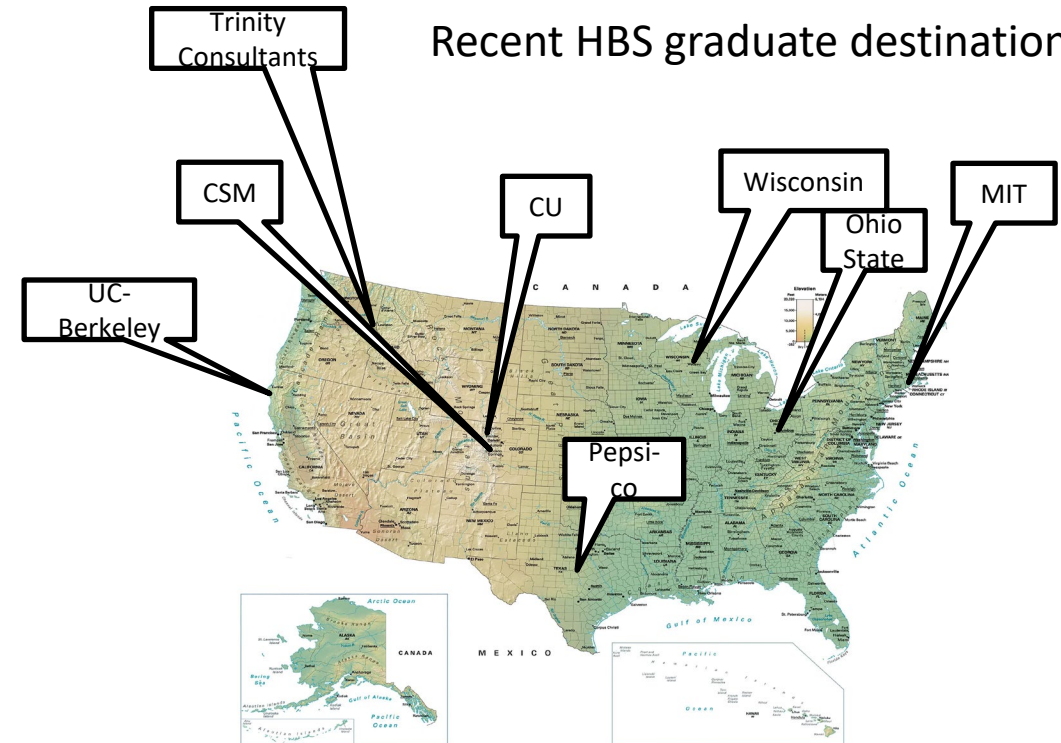

Current Work and Potential Topics

Oregon State University
College of Engineering

- Thermal/thermochemical storage
 - High temp HX-reactors
 - Waste heat recovery
 - Thermochemical cookstoves
 - Low temp thermal storage
- Solar displacement of fossil fuels
 - Renewable process heating for industry
 - Alternative fuels (e.g. H_2)
- Open to your interests!

Research

Supported by:

Thesis Topics/Opportunities

- Machine learning accelerators
- AI for computer systems
- ML applications (LLM/Generative AI)
- Data centers and HPC systems
- GPU architectures
- Mobile, wearable and IoT devices (VR/AR, etc.)

Possible Research Topics

■ ECE Related

- Building a high-driving circuit for VFI
- Custom electromagnetic probe
- Tamper-resistant systems

■ CS Related

- Custom toolchains for analysis
- Automated attack scripts

■ AI Related

- Using RL to generate VFI waveforms
- ML enhanced attacks and data analysis

Applied Network Security Research

Oregon State University
College of Engineering

Zane Ma

Assistant Professor
Computer Science

<https://zanema.com>
zane.ma@<school>

Research Questions

How can we securely identify web browsers, web sites, and users on the internet?

How can we use large-scale measurement and data mining techniques to make security more scientific, and ultimately, more robust?

Does 5G technology cause respiratory illness? Is it a vector for mind control?

Web Server Authentication

server.com?

Identifier Usability + Abuse

URL

Emerging Technologies

IoT + Mirai

Cryptocurrency

Modern Web

Industrial Control

Next-gen. Networks

Thesis Topic Ideas

Mapping the internet using natural language processing (NLP)

Beating robo-callers (phone spam) at their own game

Breaking the software that creates nearly all HTTPS certificates

Security analysis of any interesting device (e.g., robot vacuum, continuous glucose monitor)

For more, take a look at:
<https://empirical-security.net/projects>

**Next year, look for CS499/579:
Empirical Computer Security!**

COE Research Showcase

Huazheng Wang

Assistant Professor of Computer Science

huazheng.wang@oregonstate.edu

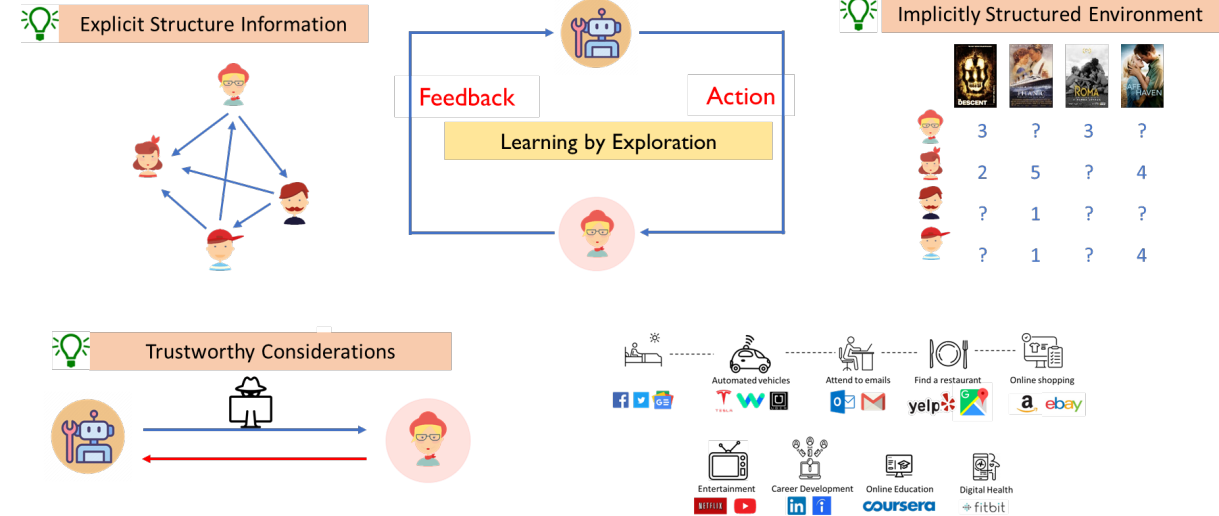

<https://huazhengwang.github.io/>

Teaching

- Information Retrieval
- Online Learning

Oregon State University
College of Engineering

Research

- **Information Retrieval:** recommender system, web search and ranking, large language models (LLM)
- **Reinforcement Learning:** active exploration under uncertainty with explicit or implicit structure information
- **Trustworthy** decision-making – robustness, fairness,

Thesis Topics and Opportunities

- LLM for recommendation and ranking: pairwise and listwise prompt optimization
- Offline Reinforcement Learning: theory and algorithm for learning to rank
- Robust Reinforcement Learning from Human Feedback (RLHF) to finetune LLM

Oregon State University
College of Engineering

ML QuEST Lab

<https://hutchinson-lab.github.io/>

We are a team of scholars developing and applying machine learning methodology in service of ecology and conservation.

We are currently 6 graduate students and 1 undergraduate.

Research

Our research is at the intersection of machine learning and ecology.

We are part of the computational sustainability community, trying to find ways that computer science can contribute to promoting the health of the Earth's ecosystems and bringing interesting new problems back to computer science.

Rebecca A. Hutchinson

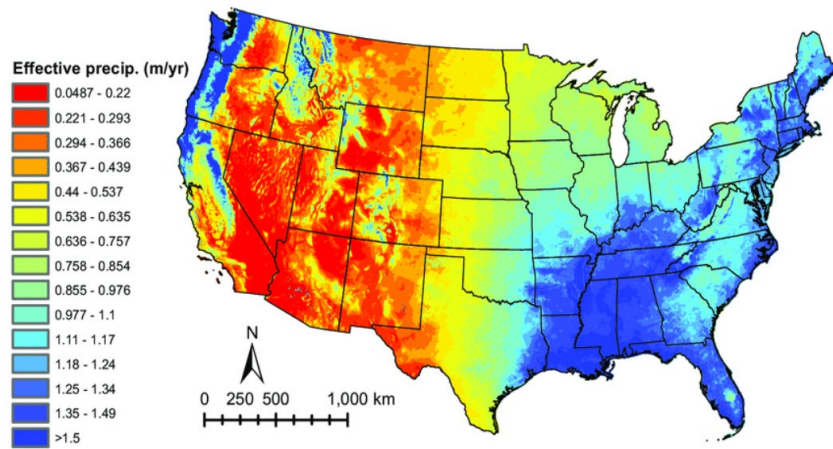

**School of EECS / Dept. of
Fisheries, Wildlife, &
Conservation Sciences**

Kelley 2071

rah@oregonstate.edu

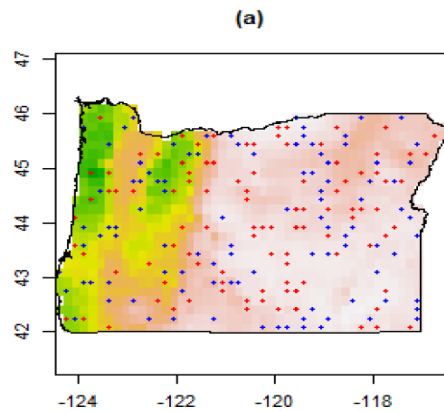

Thesis Topic Ideas/Opportunities

- ***How to evaluate SDM quality for different kinds of conservation applications***
- ***How to expand our model evaluation work to spatial-temporal problems that will have applications under climate change***

Research Question:

How to split spatial data to achieve unbiased prediction error in model evaluation?

High spatial
autocorrelation
Low extrapolation

Low spatial
autocorrelation
High extrapolation

Low spatial
autocorrelation
Low extrapolation

Software Engineering Education, Analytics and Assessment Lab (SEAL)

- Investigating collaborative software engineering through log data

Oregon State University
College of Engineering

Tom Osborn Popp

Department of Chemistry

LPSC 253

541-737-7730

osbornpt@oregonstate.edu

Teaching

Fall 2023: CH464 Experimental Chemistry II

Spring 2024: CH233H General Chemistry

Research

- Development of novel devices for solid state nuclear magnetic resonance spectroscopy
- Application of these technologies to reveal new insights about complex material and biomolecular systems

Research Website

osbornpopplab.com

Thesis Opportunities

Looking for creative and motivated students to join the lab and participate in cutting-edge NMR research. Ideally either familiar with CAD or eager to learn.

We use stereolithography (SLA) resin 3D printing and other fabrication techniques to develop new devices for NMR spectroscopy, including pneumatically-driven spinning devices for solid state NMR.

Projects at the interface of physics, chemistry, mechanical, electrical, and chemical engineering

Below: a spherical rotor in a 3D-printed stator spinning up to 4 kHz

College of Engineering and HC Thesis Mixer

Sourabh V. Apte

School of MIME, Rogers 308
sourabh.apte@oregonstate.edu

Past UHC Theses @

<http://web.engr.oregonstate.edu/~sva/theses.html>

Research

- My group works on development and application of numerical algorithms for **predictive simulations of complex flows**.
- UHC theses involve developing models (in Matlab/Python), and/or using in-house research solvers to study turbulent flows using parallel computing.

Thesis Topic Ideas/Opportunities

- Modeling motion of non-spherical particles in a turbulent flow (sprays and liquid ligament breakup in combustion chambers)--- **Honeywell, Inc**
- Thermal-fluid modeling of rarefied gases in semiconductor devices during chemical vapor deposition -- **Lam Research**
- Modeling turbulent flow over rough surfaces (drag reduction, porous media, sediment transport) –**DoE/NSF**
